## AIRSHIP OVER SALTON SEA

Propellers Can Be Seen by the Aid of  
Field Glasses.

Los Angeles, Cal., June 4.—A special dispatch from El Centro says:

"All Imperial valley is excited over reports of a mysterious airship which is making nightly flights over Salton sea.

"At first the ship appeared to be stationary at a point directly over Salton sea near the intake of the Alamo and New rivers. Then it began a rapid flight, passing directly across Salton sea and disappearing in the shadows of San Jacinto mountains.

"At Brawley a party of 20 men is said to have observed the machine through field glasses. Its appearance was that of a basket fastened between two wide wings and when the turn was made it is said the propellers could be plainly seen. The observers were unable to distinguish any person in the basket."
